Amy:

This was after a heavy rainfall event. I had to move water from the south pond to the north pond and discharge water from the middle pond to the storm drain. Moving water to the north pond continued the overflow of the water out of the north pond to the storm drain.

I have taken all actions I can to prevent water from falling on the property by rerouting the gutters of the buildings directly to the storm sewer.

I have used 2 vacuum trucks and 2 pumps and hoses to move stormwater around the site to prevent the failure of the dike around the south pond which would release the water into the neighborhood. I have taken some steps to protect the dike in case of heavy rainfall so that it will not fail and release everything to the neighborhood. I have placed and manual overflow drain that will go into the neighborhood.

I am already spending more money than I want to in order to manage the stormwater ultimately possibly limiting the cleanup actions I need to conduct.

I need help.

Also, I will send you an email from the City indicating they have no issues with the quality of the stormwater.

Thanks

Gary Moore
